This home's performance is rated in terms of the energy use per square metre of floor area, energy efficiency based on fuel costs and environmental impact based on carbon dioxide (CO₂) emissions.

Energy Efficiency Rating		Environmental Impact (CO ₂) Rating	
Current	Potential	Current	Potential
A	B	D	C

Estimated energy use, carbon dioxide (CO₂) emissions and fuel costs of this home

	Current	Potential
Energy use	299 kWh/m ² per year	268 kWh/m ² per year
Carbon dioxide emissions	3.2 tonnes per year	2.8 tonnes per year
Lighting	£33 per year	£23 per year

Hot water	£76 per year	£62 per year

You could save up to £55 per year

The figures in the table above have been provided to enable prospective buyers and tenants to compare the fuel costs and carbon emissions of one home with another. To enable this comparison the figures have been calculated using standardised energy conditions (heating periods, room temperatures, etc.) and are the same for all homes, consequently they are unlikely to match an occupier's actual fuel bills and carbon emissions in practice. The figures do not include the impacts of the fuels used for cooking or running appliances, such as TV, fridge etc., nor do they reflect the costs associated with service, maintenance or safety inspections. Always check the certificate date because fuel prices can change over time and energy saving recommendations will evolve.

Remember to look for the Energy Saving Trust recommended logo when buying energy efficient products. It's a quick and easy way to identify the most energy efficient products on the market.

This EPC and recommendations report may be given to the Energy Saving Trust to provide you with information on improving your home's energy performance.
